Redis是一个开源的BSD许可的高级“键-值”缓存和存储系统。

Redis is an open source, BSD licensed, advanced key-value cache and store. It is often referred to as a data structure server since keys can contain strings, hashes, lists, sets, sorted sets, bitmaps and hyperloglogs. 它通常被认为是一个数据结构服务器，因为键可以包含字符串、哈希表、列表、集合、有序集合、位图、超级日志。

### Try it 试试Redis

Ready for a test drive? Check this [interactive tutorial](#) that will walk you through the most important features of Redis.

交互教程将引导你完成Redis最重要的功能

### Download it

Redis 2.8.19 is the latest stable version. Interested in release candidates or unstable versions? [Check the downloads page](#).

### Quick links 快速链接

The [Redis Twitter account](#) is a good source of fresh info.

Our [code is at Github](#) for you to follow the development daily.

[Get help](#) or help other users [subscribing to the Redis Google Group](#), we are 5000 and counting!

### Redis Twitter stream...

Redis change #5: No longer back-porting across branches. All new stuff goes into unstable (periodically merged into testing).

Redis change #4: Development model changed: three branches, stable/testing /unstable, at least 4 new stable releases every year.

Redis change #3: Issues / PRs are now handled by myself at least twice every week (full time days). Also @mattsta replies to a lot of stuff.

Redis change #2: there is now a way to submit big changes to the project, Redis Change Proposals: <https://t.co/4xcpMoFiyG>

Redis change #1: There is now a redis-dev list for development discussions, separated by the “get help” list (redis-db).
